

Website Project Proposal

Name

The Art of Finance

Description

The website will be a comprehensive finance education hub. In a similar vein as a NAND to Tetris class, the hub will start with basic first principles (time value of money, present value, future value, etc) and build upon them to teach more advanced concepts (bond valuation, stock valuation, portfolio strategy, etc). Each page will progressively add a layer of complexity and build upon the last, allowing users to gradually acquire skill and move through the material at their own pace. Engaging visuals will be used to illustrate difficult concepts and provide users with useful mental models. Practical applications of concepts will be emphasized throughout the learners' journey.

Pages

- Finance Overview (a general overview of what finance is and the role it plays)
- Time value of money (Foundational concepts including present and future value)
- Debt (An introduction to debt instruments and bond valuation)
- Equity (An introduction to equity instruments and stock valuation)
- Alternatives (An overview of alternative investments and portfolio strategy)
- Applications (How you might evaluate investments on your own given the knowledge you have gained)
